

FIRE AND EXPLOSION INVESTIGATIONS

AMRIC Associates offers thorough and extensive fire scene examinations, combining detailed documentation of the scene and proper collection and preservation of evidence to provide a correct origin and cause determination of every fire/explosion investigation.

These elements, along with the proven ability to provide expert witness testimony in criminal and/or civil court proceedings, help bring a successful conclusion to any fire/explosion case.

Fire scene documentation includes detailed, computerized sketches, as well as 35-mm and digital photography. Video is also available upon request. We conduct detailed, recorded interviews with all pertinent parties, and provide typewritten transcripts with the final report. AMRIC's use of certified fire investigators with every case is testimony to our commitment to professionalism.

AMRIC's team of fire/explosion investigators is headed by a professional with more than 25 years of experience in the field. This team has provided expert testimony in various courts on numerous occasions. Our team leader, an internationally recognized instructor, has taught for the National Fire Academy, New Zealand Fire Service, and at several major universities in the United States. He, along with our certified staff members, can be deployed to a fire/explosion scene in a matter of hours.
